2015 Credibly Green Environmental Report

Annual Carbon Footprint

For the year to March 2015 total carbon dioxide equivalent (CO₂e) emissions from [company name] was **17.4 tonnes**.

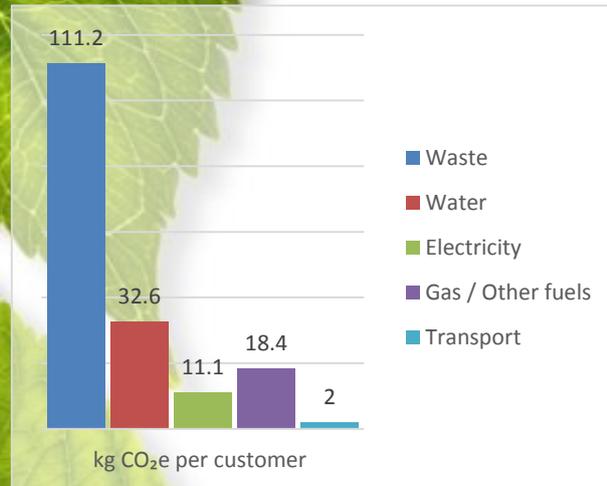

This equates to **0.17 tonnes** of CO₂ emissions for each £1000 turnover.

63.7% of these emissions are associated with waste, with **92.6%** a result of waste treatment and disposal activities.

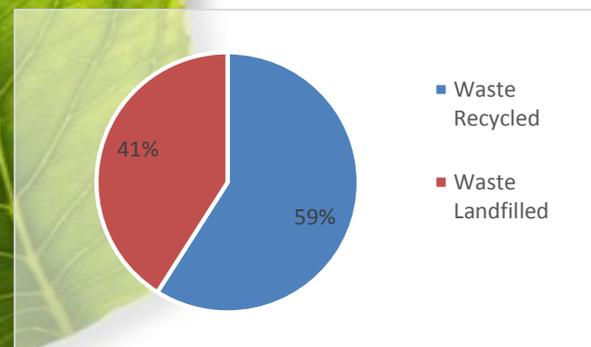

Annualised Headline Impacts

Waste	74.16 kgCO ₂ e / tonne
Water	0.58 kgCO ₂ e / m ³
Electricity	0.28 kgCO ₂ e / kWh
Gas / Other Fuels	0.18 kgCO ₂ e / kWh
Transport	6.25 kgCO ₂ e / litre

Performance to Date

[Company] continues to improve its recycling performance and this is reflected in the recent reduction in carbon emissions as shown in the graph overleaf. For the last four quarters carbon performance has exceeded the average of the Nottinghamshire NHS.

This report has been compiled by Credibly Green, led by consultants from Frith Resource Management Ltd, an independent Waste Management Consultancy. Data obtained from [company] has been modelled using a bespoke monitoring tool designed by FRM using published Government data and version 2.0.1.8 of the Environment Agency's WRATE software to determine the environmental parameters and Key Performance Indicators.

Full results and supporting modelling data are presented in

This report relates to data collected from [company] during the financial year ending March 2015.

How are we doing?

Comparison Factors

CO₂ Emissions

A Volkswagen Golf 1.4 Petrol (2013 model) emits 1 tonne of CO₂ for every 4,315 miles travelled.

Ecological Footprint

In the UK the average ecological footprint is near 5.4 GHA per person, compared with a global average of 2.6 GHA per person. The bio-capacity of the earth allows 1.8 GHA per person, which means that the consumption of resources in London, and at a global scale, is beyond the means of what the planet can support.

Household Waste Generation

Each person in England generates 428 kg of household waste per annum (July 2011 to June 2012) in the home. Therefore it takes an average English citizen 2 years 4 months and 1 day to generate 1 tonne of household waste.

Energy Consumption

The average UK household consumes 3,300 kWh of electricity and 16,500 kWh of gas per annum.
